

Ryan's Equipment Grapples

Our grapples feature **T1 steel**, **oversized chrome pins**, and **hardened steel bushings** for durability and dependability. Serrated edges along the sides of the frame stabilize the load when hauling horizontally and the inside serrated cradle stabilize the load perpendicular without having to re-adjust your load for balance. Our rotators feature **360 degree continuous rotation** and as much lifting power as the carrier can handle. Our grapples are manufactured with the standard quick attach for skid steers, or can be custom fit for your carrier or excavator.
